

**“How do I utilize
the Cloud securely?”**

Innovate Cloud

With multiple levels of security for ultimate data protection, Innovate Cloud is designed to shield your company's confidential, critical and sensitive information from security breaches. Innovate Cloud is user-friendly and allows you to easily upload, share, edit and download files within a protected environment. The cloud-based file sharing system is hosted on Innovate E-Commerce's private, secure server.

- **Secure cloud-based sharing system**
- **Hosted on Innovate E-Commerce's private server**
- **Drastically reduces the risk of security breaches**
- **User-friendly**
- **Customize to reflect your company's branding**
- **Easily upload, share, edit and download files**
- **Conveniently accessible on all digital devices**

Our world has become increasingly more reliant on cloud-based solutions for file storage and sharing. Dropbox, WeTransfer, Google Drive and OneDrive are all widely used. However many people do not realize that these systems are vulnerable to unexpected security breaches. Many of these solutions are housed on a public server, therefore once a file is uploaded, ownership is automatically relinquished. This can lead to unforeseen exposure of confidential information or data breaches that can result in a loss of time, money and creditability. Innovate E-Commerce has the solution to reduce security risks with the development of Innovate Cloud, the secure, cloud-based file sharing and storage system. You setup your Innovate Cloud environment to share your files with only the people you want to have access to them.

Innovate Cloud is housed on a private, secure server managed by Innovate E-Commerce, with multiple levels of security for ultimate data protection. Innovate Cloud is user-friendly and can be customized to your business needs. Users are easily prompted to upload, share, edit and download files within a protected and secure environment.

Innovate E-Commerce will also tailor Innovate Cloud to reflect your company's branding giving it a consistent look across all digital devices for convenient access to private files.
